ABSTRACT

Please amend the abstract as follows:

An eductor [[(1)]] having an air gap [[(5)]], a venturi structure [[(3)]], and a non-return valve [[(19)]] located in the air gap [[(5)]]. The non-return valve is removable and allows the eductor to be operated as an air gap eductor or a non-return valve eductor. A non-return valve cartridge [[(19)]] for installing in to the air gap [[(5)]] of an air gap eductor [[(1)]], so that the eductor can be operated as a non-return valve eductor. A method of retrofitting a non-return valve [[(19)]] in an air gap eductor [[(1)]].
